ORCA RECOVERY DAY

October 16th

SIDE 1: MATCH THE ACTION WITH THE REASON WHY IT HELPS ORCAS

Volunteer Orca-tober 16th for Orca Recovery Day!

Properly align and inflate your car tires regularly

Plant native trees and shrubs along curbs, yards, and streams

Use non-toxic yard products and household cleaners

Communicate to leaders that salmon habitat restoration is a priority

Properly dispose of litter and pet waste

Wash your car at a carwash and fix car leaks

Tire care reduces tire tread that flows to Puget Sound through storm drains and is toxic to salmon

Removing toxins in yard products and cleaners removes their flow from our pipes to Puget Sound

Carwash facilities catch harmful car runoff before reaching Puget Sound. Driveways do not

Disposing pet poop in the garbage prevents its washing into Puget Sound, which reduces harmful bacterial levels

Native plants along curbs, yards, and creeks filter pollutants before they Puget Sound in rain runoff

Little actions, all added up, make a big difference

Restoration competes with other important issues. Leaders don't know how you feel, unless you communicate on your issues.
